SHORT PRESENTATION

My extended family has had and still has relatively many doctors, with me being part of its **2nd generation of physicians**: I was inevitably (and deeply!) influenced and guided from my childhood in the mysteries of biology in general and then attracted almost magnetically to **human medicine**, the science that has ... the honor to study and repair a **possibly divine creation**, the human being. I graduated the General Medicine Faculty of the **University of Medicine and Pharmacy ("UMF") "Carol Davila" Bucharest** ^[URL2] in 2007 and I chose **Pediatrics** as my specialization field: I have completed my **pediatrics residency** in 2013 at the **Clinical Emergency Hospital for Children "Marie S. Curie"** ^[URL2]. During my pediatrics residency I've learned a lot about children and their acute and chronic physical and mental health problems. In the following years, as a pediatrician specialist, I have gained experience in serious clinical cases (including children with relatively rare and very rare diseases). I am particularly interested in **pediatric nephrology**, **gastroenterology** (including **pediatric gastroesophageal reflux disease** ^[URL2], **diabetes mellitus** and other **nutritional diseases** ^[URL2]) and **pediatric pneumology**. The experience of recent years has also brought me closer to **pediatric cardiology**, **rheumatology**, **neurology** (gaining experience in the **diagnosis and treatment/management** of **Duchenne** and **Becker muscular dystrophies**) and **pediatric**

psychiatry (and **psychology**). I also created various **medical software** (among which an "**Electronic Pediatrician (EPed)**") that helped me in all these directions.

Also, in my recent years of pediatric practice, I have initiated independent research in **nutritional genomics** (aka "**nutrigenomics**"), which is a relatively new medical subdomain that deals with the study of molecules in foods (and dietary supplements) that have the potential to positively influence the regenerative and auto-regulatory capabilities of **human cells** (down to the **DNA/RNA** level), especially **NRF2 selective activators** ^[URL2]. The **ionized medical waters** (**ASEA**, **kangen**, etc.) also drawn my attention, as they have some special (and very appreciated!) **physical**, **chemical** and **biological** properties which makes them good candidates for many protocols in the future official medicine (including pediatrics and especially preventive pediatrics, a medical branch with great importance). In 2018, I even managed to publish **the first documented medical case (worldwide) about the remarkable effects of ASEA on a small child (2-3 years old) with Duchenne muscular dystrophy** (see **link1** [RG], **link2** [Academia], **link3** [Vixra] si **link4** [GSJournal]).

In my daily work, I put a lot of emphasis on the preventive component of pediatrics, which should be a priority for all doctors and patients alike. I am guided by **Christian** principles in both my medical practice and in my everyday life and I believe that all patients - and especially children - deserve an integrative approach so that to help them find the best preventive and/or curative treatments (predominantly natural and minimal allopathic).

My main site (created by my own) is **WWW.DRAGOII.COM** (which automatically redirects to **WWW.DR.DRAGOII.COM**, which is a pasteboard-like site)

I've also designed **multiple secondary sites to inform the general public about various medical conditions**:

1. **nrf2.dragoii.com** (a website dedicated to the latest advances in the study of **NRF2 activators** and **nutrigenomics**)
2. **msr.dragoii.com** (**asea.dragoii.com**) (a website dedicated to the latest advances in the study of **redox molecules therapy** [**stabilized oxidant and reductive free radicals**] with a strong selective NRF2 activation effect) (which therapy can be considered a **nutrigenomic therapeutic tool with great perspectives and very large potential applicability**)
3. **kangen.dragoii.com** (a website dedicated to **kangen water** and to **alkaline ionized waters** in general, waters with strong **reductive** properties,

- so that they may be also considered a great potential therapeutic tool of [nutrigenomics](#))
4. [sucve.dragoii.com](#) (a site dedicated to “green” juices, with multiple health benefits for children and adults; also a valuable tool of [nutrigenomics](#));
 5. [autism.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children with autism**)
 6. [adhd.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children with ADHD**)
 7. [dz.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children and adults with diabetes mellitus**)
 8. [obez.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of overweight and obese children and adults**)
 9. [cancer.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children and adults with malignancies [cancer]**)
 10. [hiv.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children and adults with HIV / AIDS**)
 11. [down.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children and adults with Down syndrome**)
 12. [neuro.dragoii.com](#) (a website dedicated to the latest advances in the **diagnosis and treatment of children and adults with neurological disorders**)
 13. [med.dragoii.com](#) (a medical website with notions of [pediatrics](#) and [general medicine](#), useful medical links, etc.)
 14. [biocel.dragoii.com](#) (a website dedicated to the latest advances in [cell biology](#))
 15. [biomuz.dragoii.com](#) (a website dedicated to the latest advances in the [neuroscience of music](#) and [music psychology](#))
